On set systems with restricted k-wise
L-intersection modulo a prime number

张慧慧
洛阳师范学院

In this talk, we derive a bound on the size of a $k$-wise $L$-intersecting family (resp. cross $L$-intersecting families) modulo a prime number. This result may be considered as a modular version of Theorem 1.10 in [J.Q. Liu, S.G. Zhang, S.C. Li, H.H. Zhang, European J. Combin. 58 (2016) 166-180]. We also report a theorem which extends the well-known Alon-Babai-Suzuki theorem to two cross $L$-intersecting families. This is joint work with Professor Shuchao Li.
